Expertise: Collaboration and Unified Communications

Anywhere, anytime and on any platform

Collaboration technologies, such as video conferencing and desktop sharing, improve team communication and enable mobility. By investing in these solutions, you can resume operations from remote locations on a variety of devices, enable faster customer support, and increase employee and team-based productivity. With the help of our expert team, organizations can develop a feasible roadmap for deployment, find appropriate solutions to align with their business strategy and increase their ROI.

Healthcare expertise

If you require healthcare-specific services, we have dedicated staff who specialize in analyzing unique healthcare application and IT environments. Our team also has a wealth of experience integrating collaboration technologies into clinical and technical workflows, and we can help improve clinical efficiency through solutions such as improved nurse call systems, telemedicine and updated emergency response systems.

IT environment assessments for collaboration technologies

To maximize your ROI, our proven assessment methodology focuses on identifying risks and providing actionable recommendations that bring value and support overall business objectives.

When organizations are considering collaboration technologies, we can help IT leadership determine if their infrastructure is ready to accommodate certain solutions, and we can pinpoint what available products best align with business requirements and goals.

Key benefits

- Increased ROI from collaboration investments
- Comprehensive IT assessments to help build a strategic roadmap
- Vendor management
- Thorough design work to ensure long-term success
- Work flow integration and other implementation and

Expertise: Collaboration and Unified Communications

Design a comprehensive collaboration architecture

Designing custom solutions and appropriately documenting design work are crucial steps toward a successful implementation. If organizations invest in the planning and design stage, implementation and post-sales support will be exponentially easier.

To properly roll out new collaboration technologies, businesses depend on a number of telecommunication components, such as dial plans, call flows, interactive voice response and call routing auto attendants. Additionally, various components, such as Power over Ethernet (IEEE 803.3af) and quality of service, need to be leveraged to get the most out of new solutions.

With many factors to consider, organizations commonly discover unexpected issues that need to be accounted for while designing solutions. Our experienced engineers and project managers can guide you to make sure these issues don't result in incomplete projects or problems.

In addition to helping you develop a technical architecture, we can also help you develop an appropriate implementation schedule and prepare your team to be able to maintain systems during the platform's lifecycle. By providing this service, we ensure support teams aren't overwhelmed by technology changes that might have been introduced too rapidly or without proper foresight.

Implementing collaboration solutions

Whether you're looking to implement VoIP or video conferencing tools on a cloud or on premises, successfully rolling out these solutions and aligning them with your organization's strategy can require specialists and experienced project managers.

We're comprised of collaboration, network and other engineers along with skilled project managers and executive leaders who've had considerable success integrating this technology into commercial, government and healthcare enterprises.

Using a project management methodology that incorporates PMI techniques for upfront planning and agility for execution, we can provide a roadmap and adapt if issues arise. Our team can also help integrate solutions into technical and end-user workflows, and we can provide knowledge transfer that helps teams leverage new capabilities post implementation.

About T2 Tech Group

T2 Tech Group is a premier provider of vendor agnostic technology consulting. With the ability to see projects from assessment to post implementation, we strengthen client organizations by leveraging an experienced team, balancing business and IT, providing unbiased solutions, practicing transparency and using a proven methodology.
